Consumptive vs Conjunctive

1. Flushing flows.

- Who speaks for the clam. (also the beach houses dependent upon flushing flows of sand)

2 Refuges. These could have increased flood control value.

Not all are the same agronomically as some recharge the water table.

Simplification is East Side of Great Valley is more porous than the west.

Refuges are not politically correct recreation; therefore are left out compared to fish which are a politically correct tool or weapon often for other objectives.

Sterile Rivers.

While currently without plans, in future phases it would seem appropriate to acknowledge there condition such as:

Kern which also serves urban use.

Mattole which impacts anadromous populations.

The Five H's (a mnemonic that I can never remember)

Hydro - aeration & spillways on dams would be cost effective

Heat - if reaches of the San Joaquin gets water H_2O without shading, little will be accomplished

Habitat. Consider 2 pools on the SJ so one can be dumped for flushing

Harvest. This is mainly a F&G, NMFS, & international issue
