After three years of work, a list of recommendations has been formed to meet the water needs of disadvantaged communities. The list was developed during a recent three-day workshop that included representatives from DWR and the State Water Resources Control Board. The recommendations cover several issues including agency alignment, education, and funding.

Several items related to water storage are on tap for next week’s meeting of the California Water Commission. The agenda includes a briefing on the report, Integrating Storage in California’s Changing Water System. The meeting is Wednesday, Feb. 18, in Sacramento.

A water management planning tool has been released by DWR to help local agencies with their responsibilities related to the California Water Plan, integrated regional water management, and the Sustainable Groundwater Management Act. The tool is an interactive map application that provides water management boundary data.

Questions and answers from a recent webinar on infrastructure financing tools have been posted on the Meeting of the Minds Web site. The posted material covers areas not addressed during the original event because the webinar generated more questions than could be answered during its one-hour time frame.

The U.S. Bureau of Reclamation has released the Central Valley Project Integrated Resource Plan. The report assesses the impacts of climatic and socioeconomic uncertainties on the Central Valley Project Divisions. It also looks at adaptation strategies for addressing the uncertainties.
